

Environmental Policy

As a Contract Electronics Manufacturer, ADAPT ems provide assembly services to Original Equipment Manufacturers and Product Designers. By definition this means that the company does not design its own products, but assembles the products designed by our customers.

With this in mind the company is committed, through a process of continuous improvement, to run the business in an environmentally responsible manner in accordance with current legislation, standards and best practice.

Fundamentally this entails minimising the consumption of energy and material and ensuring sensitive and responsible disposal of any waste in order to minimise our impact on the environment.

In order to achieve this, so far as is economically practicable, the company will maintain an environmental management system to ensure:

- The energy consumed by the business as a whole is monitored and minimised wherever possible.
- New equipment will be assessed for energy performance and preference given to equipment with the greatest efficiency and minimum creation of pollutants.
- Material procured will be kept to a practicable minimum for the work required to minimise waste.
- Packaging and shipping services will be assessed for environmental performance including the use of reusable packaging where possible.
- Preferred suppliers are selected on criteria including environmental parameters where possible.

The company will ensure this policy is communicated to all our employees and that they are aware of the environmental aspects of their work.

Guy Janney
Managing Director
