

Electronics Test & Repair Technician/Engineer

The role:

This is an exciting opportunity for an experienced electronics test & repair Technician/Engineer to help establish a new repair function to support a customer specific project. This will require working closely with a wide range of internal and external stakeholders including customers and design engineers.

The individual will be responsible for undertaking repair and refurbishment of complex electronic equipment and must be able to fault find to sub system/component level, supporting with trend analysis and root cause investigation.

Skills:

Repairing and testing customer electronic equipment; fault finding to component level.

Experience with ARM/Linux based systems, also with RF experience.

Mechanical assembly skills; in particular working with camera based/optical systems.

Experience with embedded software applications.

Generating repair documentation.

Preparing technical documentation and writing reports.

Recording, analysing and interpreting test data.

Assist in developing suitable test solutions to help with fault finding and diagnosis.

Person spec:

The successful candidate must be PC literate and have excellent verbal and written communication and interpersonal skills.

A self-starter with ability to work on their own initiative and take the lead in establishing this new function.

Previous experience in repairing/testing card payment devices would be useful but not essential.
